

Week 8 Interview Marking Rubric

- How to pass this assessment:
 - The interview itself is a hurdle. You must attend, participate, and answer questions from your markers.
 - You will be informed if you are at risk of failure in the unit. You will still have another month to improve your performance before the Initial Paper is due in Week 12.
- Instructions for students
 - You must organise a 30-minute interview with your markers and supervisor.
 - Communicate with them to find a time when everyone is free. The interview can be on Zoom or in person, either in the supervisor's or markers' offices.
 - Interview schedule:
 - 10 mins: Your presentation: this can be verbal or using slides, your choice. Think about how to demonstrate your progress against the criteria listed in the rubric on the last page of this presentation.
 - 10 mins: The markers will ask questions about the project, your initial progress, and your anticipated results.
 - 5 mins: The markers will provide initial feedback.
 - After 25 minutes, The supervisor will leave the meeting. You can flag any supervisor issues here.
 - The meeting concludes.

Week 8 Interview Marking Rubric

- Instructions for Supervisors and Markers

- Supervisors and markers should confer on the feedback and result.
- One of the markers will submit the marks through a very short online Google form.
- Please note any students who were absent for the interview (and not excused by their supervisor). Students who are absent from the interview without approved Spec Con will fail the hurdle and the unit. This will be verified through a conversation between the supervisor and the Chief Examiner.
- A section in the form will note if any students in a team project have not contributed to the same standard as their teammates.

Week 8 Interview Marking Rubric

Marking criteria:

Criterion	On Track
Problem identification	- An initial literature review or state-of-the field study has been performed, and gaps have been identified. - A solid problem to work on, justified by the literature (e.g. aim/objectives/research question/problem statement), has been identified.
Methodology/methods	- A methodology and methods are described and seem feasible and appropriate. - If a Risk Assessment or Ethics Approval is required, this has been started.
Problem analysis and solutions/experiments	The problem is sufficiently analyzed to propose and justify a range of potential solutions or experiments.
Initial scope	- The plan on achieving the Week 12 deliverable (Initial Paper) and the end of the project deliverable (FYP B Final Paper) is described. - It has been demonstrated that some work has been done.
Results	Some anticipated results are described.
Project schedule and challenges	- There is a plan on how the project will be completed on time. - Potential project risks or challenges are identified. - Any use of AI in the project is explained and justified by the students and authorised by the supervisor.
